

Combine this with LNP nano touch...

Viscosity measurement with LNP nano touch

a highly accurate, versatile tactile sensor with position resolution in the nanometer range and variable power...

... and the LNP precision cross table

Modular cross table by LNP

Product properties

- Triangular shape
- High quality granite slab
- Innovative design
- Quick und flexible clamping
- Extremely firm and solid structure

LNP measuring stand

High quality and innovative

From the user - for the user

As the stiffness of conventional measuring tripods is not enough for challenging measuring tasks, the Ludwig Nano Präzision GmbH developed a measuring stand with an extremely firm and solid structure.

These characteristics are induced by its innovative triangle shape. Our product is mainly characterized by its flexural rigidity and its continuously pivoting quick action fix.

swivel range of the quick-action fixture

For highly precise measurement tasks

Two-point measurement station

The LNP measuring table is suitable for a variety of measurement tasks. It impresses with its elegant design and its high rigidity.

We think ahead...

Technical Data

Granite slab H x W x D	60 x 250 x 350 mm
Weight	19 kg
Length	400 mm
Flatness granite	Grade 0
